

ASIC SPR Edition

Simple, reliable and secure equity short position reporting to ASIC

Finpacific in partnership with Refinitiv provides for single or multiple clients to report their short sell positions to the Australian Security and Investment Commission (ASIC) online based on specifications mandated by ASIC for electronic submission of such reports.

This solution utilises the Refinitiv electronically secure Autex Trade Route FIX Network and MyTreasur-e software platform from Finpacific.

Users have the following choices for inputting position reports to ASIC:

- A web browser interface is available which allows multiple users to enter their positions or upload a spreadsheet directly; this is suitable for clients that require a simple off the shelf solution, normally with a small number of positions.
- Web Service API and SFTP are available for clients wishing to automate position reporting with a seamless service; these options are suitable for higher volume clients.

Salient features include:

- Reports can be archived (upon request) for historical purposes.
- Automatic tracking of error messages from ASIC to enable re-submission of correct input
- Straightforward onboarding process with no software installed at client site
- Simple pay as you go term plan
- Refinitiv global presence and support
